REQUEST MORE INFORMATION

Euroairport, 2 February 2016 – AMAC Aerospace Turkey completed the first EASy II upgrade on a Falcon 2000EX EASy airplane in Istanbul. In addition to that a C-Check on a B777 has been completed successfully in Basel, Switzerland. Since being assigned as Dassault Falcon Authorized Service Center in 2014, AMAC Aerospace Turkey completed the first EASy II upgrade on a Falcon 2000EX EASy airplane.

Key features of EASy II modification are:

- Improved operational safety.
- Improved accessibility to airports.
- Improved situational awareness.
- Compliance with upcoming Air Traffic Management (ATM) regulations.
- Improved operational efficiency.
- Performance enhancements based on operator feedback.

"I would like to thank our customers for confiding in our abilities and giving us the opportunity to carry out this modification which has been successfully completed within the planned timeframe and budget by our technicians and engineers who had significant experience and knowledge on similar modifications on other platforms." said Mr. Necati Ergun, Modification Team Leader and Senior Avionics Technician of AMAC Aerospace Turkey.

C-Check of B777 in Basel

AMAC has performed a maintenance check on a B777 WVIP aircraft. This project including heavy C checks, major cabin access and more than ten engineering cabin minor modifications was delivered on time and within budget due to a dedicated production organization developed for this particular challenge.

"AMAC was able to exceed customer expectations with a very good cooperation between the maintenance and engineering organizations leading to the customer's entire satisfaction." said Mr. Thomas Schlosser, Sales & Key Account Manager, AMAC Aerospace Switzerland AG.
