

AMAC Aerospace inaugurates wide-body hangar in Milas-Bodrum

AMAC Aerospace has celebrated the inauguration of the Wide Body Hangar in Milas-Bodrum, Turkey, with more than 100 guests from all over the world.

AMAC Aerospace's inauguration of the Wide Body Hangar in Milas-Bodrum, Turkey was celebrated with more than 100 guests from all over the world including politicians, airport authority officials, potential and existing clients, military personnel and the undersecretary for the Ministry of Transport and Infrastructure of the Republic of Turkey.

The new 4'626 m² Hangar will serve AMAC Aerospace's Maintenance Services in the Middle and Far East.

"We are aiming to turn Muğla into an aircraft maintenance base in the region. Our goal is to bring private and passenger planes here." said Kadri Muhiddin, Group Executive Chairman & CEO of AMAC Aerospace.

To date, AMAC Aerospace are the first to use a mixed business model for this hangar facility where during the winter months, the hangar carries out commercial line and base maintenance. During the summer months, the MRO services flip over to VIP business maintenance. The new hangar can also be used while aircraft owners spend their holidays at the Turkish Riviera and in the meantime, the maintenance on their private jet can be performed.

"Thanks to AMAC Aerospace Turkey, private jet owners in the Middle East will not have to go to Europe for the maintenance of their jets. We will be able to carry out the maintenance for all aircraft – from small sized jets to wide-body to aircraft. We want Turkey and Muğla to become a regional hub for aircraft maintenance."
