AMAC AEROSPACE

Our Hangar at Istanbul Atatürk Airport, Turkey

AMAC Aerospace's Hangar in Istanbul

AMAC Aerospace opened its hangar facility in 2012 with maintenance services for PC-12 NG. Since mid-2014, AMAC Aerospace Istanbul has acquired approvals for performing maintenance on Dassault Falcon 7X series, 900, 2000 and Pilatus PC-24. The well-equipped hangar facility comes with ample office space, crew lounge, a highly skilled work-force of 36 employees whereof 19 are licensed mechanics/engineers and multiple storage areas for tools and materials.

The facility is 1,500 m² with the hangar floor measuring 1,200 m². For instance, the space allows AMAC Aerospace to position 2x Pilatus PC-12 NGs and 1x Dassault Falcon 900, 3x PC-12 NGs or 3x Dassault Falcons. The Istanbul facility is based at Atatürk International Airport, Turkey and is located within the GAC area of the airport, which facilitates VIP incoming and outgoing movements. A private passenger terminal is located nearby with full VIP services at hand for any requirements when visiting Istanbul.

Swiss Excellence in Aircraft Maintenance

AMAC Aerospace was founded on sound aviation expertise and long-term industry engagement. Our founders are world renowned aviation specialists who joined forces in 2007 to create AMAC Aerospace in Basel, Switzerland. Today, we are the largest privately-owned facility in the world offering private, VIP and corporate aviation services. Combining our collective skills, we have hundreds of years of cumulative experience in all maintenance scenarios.

With the creation of a maintenance facility between Europe and Asia – Atatürk International Airport, Istanbul – we are OEM Authorized Service Center for Pilatus PC-12, PC-24 and Dassault Falcon 6X, 7X and 8X series, 900 and 2000. An ever increasing list of approvals with industry trained technicians, engineers, mechanics and systematic refresher courses keep our professional personnel up to date and current in their ratings.

Mid-size jet Maintenance

AMAC Aerospace caters to mid-size jets at our location at Atatürk, Istanbul. With approvals in place to perform maintenance activities on Pilatus and Dassault products, we have a mature, experienced and professional team carrying out a variety of activities that push boundaries of normal comfort. With OEM tools on site, healthy relationships with OEM's and a mature market of mid-size jets flying in Turkey or around the region, we have a dedicated hangar that is recognized as an approved Dassault & Pilatus Centre of maintenance.

With more than 3000 projects on Falcons including several C-checks since our inception at Atatürk Airport, we have grown our base knowledge and expertise to ensure you receive the best practice and peace of mind. We are capable to perform avionic upgrades such as Easy 2, Proline 21 with ADS-B OUT as supplementary work. Whether your aircraft requires a new interior refurbishment or a new element in cabin, we have solutions at hand to ensure you are fully satisfied. Furthermore we are able to carry out paint work with selected and trusted partners from within Turkey or Europe.

We are experts in defect rectification and can support AOG situations. Whatever the nature of the work, we are able to support you in Continued Airworthiness related work types, perform ADS-B reviews and evaluations, develop a program of maintenance, should you wish to look for a long term partner and consequentially follow up with maintenance planning. We have a wealth of experience from our engineers and technicians, therefore if you require manpower that is offsite due to technical problems, we are one phone call away from supporting you.

We ensure that you come to a one-stop shop that can cater for a variety of requirements. We aim to return your aircraft on time and on budget and in accordance with any certification.

Customer Service and Support, 24/7

We respect your goal to have your aircraft back in the air with the shortest ground time possible. Maintenance, refurbishment and aircraft modifications are accomplished in one single downtime. Our 24/7 global customer support means when you depart our premises, you remain in good hands.

AMAC Aerospace Istanbul, Turkey, is structured to manage all of your maintenance needs, offering a full spectrum of services:

- Scheduled and unscheduled line and heavy base maintenance activities on airframe and power plant(s);
- Management of major inspections, repairs and modifications;
- Execution of original equipment manufacturer (OEM), airworthiness directives (AD), customer bulletins (CB), services bulletins (SB), avionic repairs, installations and upgrades;
- Components and spare parts are available on and offsite;
- Simultaneous upgrades, light refurbishments and modifications.
- Through our close collaboration with industry partners, we are able to offer full paint renewal and livery change
